

Scramble shortening

Montag, 31. August 2020 13:36

Assume an action a of order $n \geq 6$ with inverse a' .

Let (S_0, \dots, S_9) be the current state history.

$$S_6 = \text{state_hist}[\underbrace{i - \text{repeat_counter}}_{=6}]$$

$$\{S_6, S_7, S_8, S_9\} = \text{state_hist}[i - \text{repeat_counter} : i + 1]$$

$$\{m_6, m_7, m_8\} = \text{scramble_hist}[i - \text{repeat_counter} : i]$$

Assume $S'_7, S'_8 \in \{S_0, \dots, S_5\} \Rightarrow$ only possible if $n > 3$

Case 1: Assume S'_2 occurs after S'_8 .

Without loss of generality assume $S_1 = S'_8$ and $S_3 = S'_2$.

current state history: repeat_counter = 3 $i = 9$

$$\text{new_i} = i - \text{repeat_counter} + 1$$

delete marked (4) states and actions

$$(4 = \text{new_i} - \text{state_index})$$

loop run 0: $j = 0$ new_i = 7

update new_i w/ state_index and actions

$$(4 = \frac{\text{new_i} - \text{state_index}}{2})$$

loop run 0: $j=0$ $\text{new_i}=7$

Goal: $S_0 \rightarrow S_8' \rightarrow S_2 \rightarrow S_7' \xrightarrow{a'} S_8' \xrightarrow{a'} S_9 \rightarrow S_{10}$

$\text{del}(\text{state_hist}[\text{state_index}:\text{new_i}])$

~ delete states

$\text{del}(\text{scramble_hist}[\text{state_index}:\text{new_i}])$

~ delete actions

We have to update new_i , otherwise it points to the wrong elements. after we shortened the lists.

$\text{new_i} = \text{state_index} + 1$ if shortened else $\text{new_i} + 1$

loop run 1: $j=1$ $\text{new_i}=4$ new_i

prev.: $S_0 \rightarrow S_8' \rightarrow S_2 \rightarrow S_7' \xrightarrow{a'} S_8' \xrightarrow{a'} S_9 \rightarrow S_{10}$

Goal: $S_0 \rightarrow S_8' \xrightarrow{a'} S_9 \rightarrow S_{10}$
